

StoryPhones

...headset

- The StoryPhones headsets have been specifically designed to fit children and to be simple and fun to use. Content such as stories, music and listening activities can come from a wide range of sources - anything that is an MP3 file can be played on the Headsets.
- There is a separate mp3 player built into each Headset allowing you to have either different content on each Headset, or the same content on all.
- There are **no wires** to or from the Headsets when they are being used, meaning children can take these around the classroom and even outdoors.
- StoryPhones Headsets are extremely flexible and durable, meaning there is no need to continuously replace or repair parts.
- Control buttons such as Play/Pause and Volume can be temporarily disabled. This means that children will not be distracted by pressing buttons and instead concentrate on the listening activity.
