

StoryPhones

...remote console

- **The StoryPhones Remote Console has 3 main functions; Loud playing, Recording and Control of the Headsets.**
- The Remote Console is a loud playing MP3 player. It can play music, stories and listening activities in the same way a CD or tape player can....except without the massive restriction of wires! This means listening activities can be taken outdoors.
- There is a built in recording facility allowing children to record their own stories, thoughts, music, songs etc. This feature can also be used by practitioners to record their own material; such as listening activities or stories they want their children to listen to.
- The Remote Console also a *remote control* for the Headsets. This allows adult led learning activities, giving the practitioner the ability to control when a listening activity is being played or paused —giving time for discussion between activities.
